

Digital and Optical Doorviewer

Reliable protection against uninvited guests

This digital SCHWAIGER® doorviewer offers reliable protection against uninvited guests. Upon pressing the button, the 2.4 inch HD screen shows a clear colour image for about 20 seconds. The image display can be prolonged by another 20 seconds. The digital doorviewer is suitable for older people and

children but also for people wearing glasses. No one can look into the house from outside and no one can see whether or not someone is looking through the peephole. This doorviewer replaces the common doorviewer (no need for drilling holes or using screws). Power supply is made via three AAA batteries.
